EDUCATION

Yale University: B.S. in Computer Science (2022)

WORK EXPERIENCE

Founding Engineer (Eng #4) - Poetic (<https://poetic.com>) San Francisco, CA 2025/03 - 2026/05

- Built and spearheaded adoption of DSL-specialized coding agent used by all Forward Deployed Engineers at the company
- Created run queue abstraction orchestrating 100k workflows/day in production
- Worked on single-tenant deployment model and control + dataplane architecture required for a 7-figure contract customer in banking services
- Was the most full-stack engineer at the company; only engineer working across both product and core infrastructure

Head of Engineering - Mine (usemine.com) New York, NY 2024/02 - 2025/03

- Led small but mighty team of 5 engineers + worked directly with CEO to spec out projects
- Significant IC contributions improving reliability and observability of critical bank account connection flows, and transaction authorization + webhooks using Temporal workflows
- Created rewards + repayment ledger infrastructure from scratch

Senior Software Engineer - Snackpass (snackpass.co) San Francisco, CA 2022/06 - 2024-02

- Migrated entire backend infrastructure from Heroku to Kubernetes on AWS (before EKS auto-mode existed), reducing infrastructure cost by 50%
- Revamped RabbitMQ implementations, significantly reducing the rate of incidents
- Worked on every single product surface in the Kitchen OS suite including restaurant kiosks, mobile app, online ordering, kitchen display screens, and order ready screens
- Configured CI/CD for fleet of 2000+ on-prem kiosk devices

Software Engineer - Atom Finance (acquired by reflexivity.com) New York, NY 2021/09 - 2022/05

- Worked on market, stock, and crypto API products
- Built advanced charting visualizations for technical trading product
- Created crypto data ingestion pipeline and live price streaming from scratch

Software Engineer - Rutter (rutterapi.com) San Francisco, CA 2021/11 - 2022/04

- Spearheaded abstraction of platform-specific ecommerce and accounting APIs to increase the configurability and integration speed of large data-fetching jobs
- Designed and implemented declarative code generation tools for supporting new platforms

Software Engineer - Amazon (amazon.com) Seattle, WA 2021/06 - 2021/09

- Built an ETL lambda here... wasn't that interesting but got to see how big companies work
